Software Engineer

Profile

Software Engineer

As a Software Developer with a year of experience, I have honed my skills in Java, Python, Angular, HTML/CSS, JavaScript, SQL, Vue.js, and Spring Boot. However, I focused on Java to create high-quality, secure, and dependable software. Working closely with my teams, I make sure our projects cater to our business objectives. From there, I go further to identify areas in Java that require innovation to better our software solutions. Aside from just coding, I am a specialist in troubleshooting and dedicated testing. I also perform code reviews to improve the quality of other programmer's codes. In just a year, I have successfully completed more than three projects, and my clients were highly satisfied for completing the projects on time and within their budget. I am enthusiastic about Java and technology in general to seek out new creative ideas to improve our software and help our customers.

Experience

Full Stack Developer Sep 2021 - Sep 2022 VizuaMatix PVT LTD, Rajagiriya

*Worked on various Software development projects Using Java, SpringBoot, and SQL.
